STN

 FIZ KARLSRUHE

FIZ Karlsruhe provides Derwent World Patents Index on STN® International

FIZ Karlsruhe is proud to offer access to the world's largest database of value-added patent information, the Derwent World Patents Index (Derwent WPI), via the STN International online network. Derwent WPI opens up patents to end-users and information professionals alike,

by providing clear and concise abstracts for patent documents from 40 international patent-issuing authorities, dating back to 1963. The file currently comprises more than 11 million patent family based records and over 5 million selected patent drawings, and is updated every 3-4 days.

Whether you are interested in patents for their technical content, for business planning and development, or for protecting the innovations within your own organization - Derwent WPI will give you the most complete picture possible.

Derwent WPI - The value-add

Derwent WPI is compiled through a process of rigorous classification, abstracting and intellectual indexing:

- ▶ Derwent gathers together worldwide patents and patent applications which relate to the same invention. This is provided as a concise patent family table, representing the global protection of the invention as sought by the patent applicant. Each invention's patent family is contained within a single database record for convenience and ease-of-use.
- ▶ The original patent titles are rewritten to make them more meaningful and easier to understand. Original patent titles are often very vague. The Derwent version enables users to quickly identify which patents are important to their work.
- ▶ Derwent's subject specialists write clear and concise English abstracts which describe both the legal claims and the main uses and advantages of the technology. This enables users to retrieve focused, relevant search results, and so save time and money by making the best use of their resources.
- ▶ Derwent's subject experts apply sophisticated systems of indexing, providing comprehensive searching for the professional searcher, allowing companies to search patent information with confidence.
- ▶ Derwent compiles all the International Patent Classifications

(IPC), patent assignee names and inventor names from an invention's patent family members, and records them in a single concise database record. This helps make Derwent WPI both a comprehensive and an efficient resource for patent searching.

Derwent assigns the top patenting companies a standardized code. Taking all name variations into account, this feature provides for efficient competitor monitoring and statistical analysis of patenting trends.

To learn more about the value-add why not visit the Derwent WPI home page?

www.derwent.com/worldpatentsindex/index.html

Derwent WPI gives you the most complete picture possible

Hyperlinks allow navigation to full-text, related Derwent records or legal status information

- 1 Link to full-text options with the STN Full-Text Solution!
- 2 Derwent-enhanced titles are more informative than the original, e.g. "Bulb-form lamp and manufacturing method of lamp case".
- 3 Derwent patent families summarize the global protection sought by the patent assignee/applicant.
- 4 Patent drawings are intellectually selected by Derwent abstractors to best describe the invention.
- 5 Derwent abstracts summarize both the legal claims and the practical use and advantage of the technology
- 6 Supplementary "Technology Focus" abstracting often adds useful background detail about preferred features.
- 7 Derwent Electrical/ Electronic (EPI) Manual Codes are available to all users. Access to Chemical (CPI) Manual Codes requires a separate Derwent subscription.

A Derwent WPI record via STN on the Web

Why is patent information so important?

Patents are the largest single source of technical information in the world, providing a unique and vast library of technical and research information. An average of one million new patent applications are filed every year. Over 80% of scientific information contained within patents is not published anywhere else. In addition, patent applications cannot be anonymous, and are usually the first published account of an invention.

Patents are a vital resource for uncovering new technology information, avoiding duplication of research, following competitor activities, avoiding patent infringements, and highlighting potential infringements of your company's own products. Using patent information as a current awareness information source ensures your company is always up-to-date with the latest developments in your field.

Access Derwent value-add on STN

STN International is the ideal place to search the world's largest value-added patent database. In addition to the great benefits provided by Derwent, STN offers you:

- ▶ Derwent WPI alongside fully functional versions of Chemical Abstracts Service (CAS®) databases CAplus® and CAS Registry®
- ▶ File synergy with over 210 other patent, scientific and engineering literature databases including INPADOC, IEE INSPEC and EI Compendex®
- ▶ One-click navigation directly from Derwent WPI records to patent full-text options, including Micro-patent®, via the STN Full-Text Solution
- ▶ One-click navigation between related records within Derwent WPI, and in other Derwent databases, such as the Derwent Patents Citation Index (DPCI) or Derwent GENESEQ (DGENE).
- ▶ Fully integrated chemical structure searching, using either the Derwent Chemistry Resource (DCR) or Derwent Chemical Fragmentation Codes (TOPFRAG)
- ▶ Comprehensive biosequence homology searching using either BLAST® or FASTA algorithms in Derwent Genseq (DGENE)
- ▶ Specialized Thesauri for Derwent Patent Assignee Codes, Manual Codes, Polymer Indexing, and Chemical Substance names
- ▶ Automatic abbreviations and plurals searching
- ▶ Unique and powerful online analysis and two dimensional tabulation features: analyze up to 5 Derwent WPI fields simultaneously, tabulate any two together, and then export results in delimited format to standard desktop software.
- ▶ Post processing tools in STN Express® for generating professional reports and tables

Further information about Derwent WPI on STN (files WPINDEX/WPIDS/WPIX) is available at:

STN offers the best file synergy

An INPADOC record via STN on the Web

STN International offers many databases which perfectly complement Derwent WPI, such as the international patent family and legal status database INPADOC.

INPADOC complements Derwent WPI with additional country coverage and legal status information, but does not have value added indexing or enhanced abstracts unique to the Derwent file. The two files work well together to give you the most comprehensive picture possible.

INPADOC is an international patent database containing more than 27 million records, comprising 34 million patent publications, and is produced by the European Patent Office in Vienna. Records carry bibliographic and patent family data for patent publications and utility models of 71 patent-issuing organizations back to 1968. In addition, 56 million legal status data from 40 patent-issuing organizations are also included in the database.

Unique features on STN for accessing Derwent WPI

Searching for scientific and technical information has never been easier!

Are you frequently searching for patent-related information, but don't want to use a command language? Then STN Easy, the convenient point-and-click web interface, is a most helpful tool for you.

- ▶ More than 80 of the world's leading sci-tech and patent databases available from your desktop

- ▶ Easy, Advanced, CAS Registry Number and Patent Look-Up text searching

- ▶ Predictable pricing

- ▶ Patent Look-Up Tab provides a patent-centered search environment through straightforward search mask

- ▶ STN Easy for Intranets adds customized searching to your corporate intranet

for U.S. customers:
<http://stneasy.cas.org>

for customers in Europe and elsewhere:
<http://stneasy.fiz-karlsruhe.de>

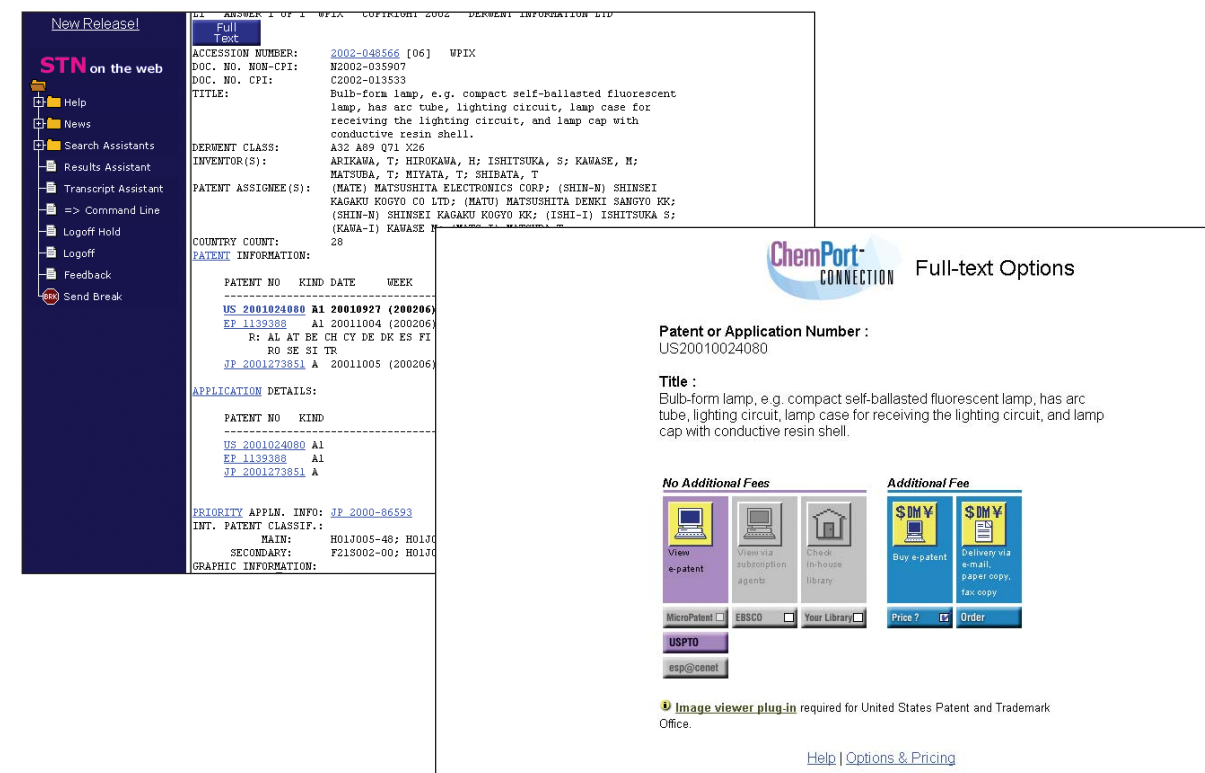

No commands

No training

No monthly fees

It's simply EASY !

STN Full-Text Solution: The perfect solution for your information needs

All three interfaces on STN - STN® on the Web, STN Express® with Discover!, and STN Easy® - provide direct links to full-text documents via the STN Full-Text Solution.

STN offers access to FREE electronic full-text of patent documents of the U.S. Patent and Trademark Office, the European Patent Office, and the German Patent and Trademark Office.

If the full text is not available electronically, you can order the print version directly via the STN Full-Text Solution. Delivery can be by e-mail, fax or mail.

STN patent files that you can use together with Derwent WPI

Derwent files

DPCI
(Derwent Patents Citation Index)
Unmatched coverage of patent citations from six major patent-issuing authorities.

DGENE
(Derwent GENESEQ)
The most comprehensive source of information on nucleic and amino acid sequences from worldwide patents.

DCR
(Derwent Chemistry Resource)
Included in Derwent WPI for searching specific compounds indexed in the bibliographic records.

BIOTECHABS
(Derwent Biotechnology Abstracts)
All aspects of biotechnology from patents, journals and conferences.

CROPU
(Derwent Crop Protection File)
All aspects of pesticides, including their use in crop protection and pest control from patents, journals and conferences.

DJSMONLINE
(Derwent Journal of Synthetic Methods)
Structure-searchable chemical reactions database from patents, journals and conferences.

Other complementary patent files

INPADOC
Patent records including international patent family data from 71 patent-issuing organizations, and legal status data published by 40 patent organizations.

CAplus®
Worldwide literature from all areas of chemistry, biotechnology, and chemical engineering. Provides timely access to bibliographic data, abstracts and CAS® patent family information.

USPATFULL / USPAT2
Full text of U.S. patents and patent applications, incorporating current classifications for all original publications issued by the U.S. Patent and Trademark Office from 1975 to the present.

PCTFULL
Full text of Patent Cooperation Treaty (PCT) published applications issued under the auspices of the World Intellectual Property Organization.

EUROPATFULL
Full text of European patent applications and granted European patents published by the European Patent Office.

PATOS
(PATOSDE, PATOSEP, PATOSWO)
Bibliographic information for German, European, and PCT applications.

IFICLAIMS
(IFICDB, IFICLS, IFIPAT, IFIREF, IFIUDB)
Complete and up-to-date range of U.S. patents, dating back to 1950.

PATIPC
Up-to-date text and graphics of the International Patent Classification (IPC) published by the World Intellectual Property Organization and the German Patent and Trademark Office.

... and more.

A worldwide scientific institution, FIZ Karlsruhe produces, provides and markets scientific and technical information services in print and electronic form. In cooperation with national and international institutions, FIZ Karlsruhe produces databases in the fields of energy, nuclear research and technology, crystallography, plastics, mathematics, computer science and physics. FIZ Karlsruhe also provides a search service for R&D in corporations and institutions.

FIZ Karlsruhe operates STN International in Europe. STN International (The Scientific & Technical Information

Network) is the world's premier online service offering access to bibliographic, factual and full-text databases in science and technology. STN's product palette encompasses more than 210 databases with approx. 350 million documents from all fields of science and technology, among them the world's largest and most important patent files as well as subject-related business files.

STN International is jointly operated by FIZ Karlsruhe, Germany; Chemical Abstracts Service (CAS), Columbus OH, USA; and the Japan Science and Technology Corporation (JST), Tokyo.
